JOEL BERMAN GLASS BRINGS COLOR TO INTERIORS

Vancouver, B.C. – In an effort to help bring more color into our lives, Joel Berman Glass Studios (JBGS), a leading innovator of architectural art glass, is pleased to announce the introduction of Berman Glass **coatings**.

Joel Berman, ever at the forefront of design, has created a permanent bonding process that has a high quality appearance, is colorfast and highly durable. While thoroughly tested for structural adhesion and compatibility for commercial projects, the selection of 26 exciting standard opaque colors makes it appealing to residential designers and manufacturers as well. Beyond the standard colorations, Berman Glass **coatings** can match any existing Pantone colors and can be custom colored for any installation or home products. The coatings were developed specifically for glass applications and permanent bonding to the glass surface making it highly scratch resistant and low maintenance.

Berman Glass **coatings** can be used on tempered, annealed, bent, laminated, flat and textured glass. Fabrication time can vary between two to four weeks, depending on the type of project, and is extremely cost effective. This new glass coating is truly the answer for creating unique and inspiring surroundings.

A complete source for all your glass needs; Joel Berman Glass Studios can provide professionals with design services, special fabrication and custom hardware.

Until January 31, 2005, Berman Glass **coatings**—which are appropriate for applications from kitchen and bath backsplashes to wall cladding, partitions and doors—are available for as low as \$12.50 per square foot in all 26 standard opaque color finishes (some quantity and size restrictions apply).
