PRESS RELEASE | APRIL 9, 2009

JOEL BERMAN GLASS STUDIOS INTRODUCES SALT

Joel Berman Glass Studios in association with Starshine presents *Salt*, a new category of flat glass surfacing for interior and exterior architecture and design. *Salt* is an innovative granulate material made from new or recycled glass cullet, colored with pigments, then fused to sheets of flat glass. The resulting dyed glass panels offer architects and designers a new form of expression in glass for designed environments.

Available in four different grain sizes and 32 intermixable colors, *Salt* works well as exterior cladding for building walls, and its natural slip resistance makes it an excellent surfacing material for floors. For interior design, *Salt's* application possibilities are limited only by the imagination. Panel thicknesses vary from 6mm to 22mm depending upon the grain size selected.

Because Salt is a colored granulate, colors can be mixed, and shapes can be arranged prior to firing for custom designs. Scripts and logos can be either placed in raised forms or integrated within a single plane.

Recycled content and low production energy use make *Salt* a good candidate for LEED points.

"*Salt* offers a colorful new way to communicate in glass," said Joel Berman Glass Studios' founder and president, Joel Berman. "The granular structure mutes the surface and extends an alternative to glass' usual glossy sheen."

###

Joel Berman Glass Studios is a world-renowned designer and manufacturer of glass art for the architectural and design community offering leading edge designs and collaboration possibilities to take any glass design project from concept to installation. From its design studio and manufacturing facilities located in Vancouver, BC, Canada Joel Berman Glass Studios offers kiln-cast and pressure-formed glass, crafted to the highest standards and featuring designer textures, colors, hardware and design services, all delivered with unparalleled custom focus. www.jbermanglass.com
